

➤ Key Insights

- Churn rate is 8.69%, but revenue impact is high (\$128K lost, \$79K at risk)
- Churn is behaviour-driven, not random — visible patterns over time
- Low engagement & low usage users have the highest churn risk
- Inactivity (50–100 days) is the strongest churn indicator
- High support interactions signal friction before churn
- Enterprise & Pro users drive most revenue, making their churn costly
- Retention improves with tenure, but early-stage drop-off is significant
