

➤ Customer Churn Analytics Project

- **Overview**

- A. End-to-end churn analysis for a subscription-based business.
- B. Built using SQL, Excel, and Tableau to identify churn drivers, risk segments, and revenue impact.

- **Key Highlights**

1. 10,000 users analysed
2. Churn rate: 8.69%
3. Revenue lost: \$128K | Revenue at risk: \$79K
4. Behavioural factors (engagement, usage, inactivity) drive churn

- **Tools Used**

1. SQL – data cleaning, transformations, cohort logic
2. Excel – validation & reshaping
3. Tableau – dashboards & visualization

- **Dashboards**

1. Executive Overview
2. Customer Trends
3. Risk Segmentation
4. Revenue Impact
5. Behavioural Analysis
6. Cohort Analysis

- **Key Insights**

1. Churn is behaviour-driven with visible patterns over time
2. Low engagement & low usage users have highest churn risk
3. Inactivity (50–100 days) is the strongest churn indicator
4. High support interactions signal friction before churn
5. Enterprise & Pro users drive most revenue, making churn costly
6. Retention improves with tenure, but early-stage drop-off is high

- **Project Structure**

1. 01_raw_data
2. 02_cleaned_data
3. 03_sql
4. 04_excel
5. 05_tableau
6. 06_insights
